

DPPA Worksheets — Compute by Hand

Worksheet S1 — Matched (Load = Gen)

$Q_c = 5,000,000$

$Q_{KH} = 5,000,000$

$FMP = 1,150$

$Strike = 1,250$

#	LINE	CALCULATION	VND / MONTH
1	Market energy	$5,000,000 \times 1,150 \times 1.026 \times 1.008$	
2	Service fee	$5,000,000 \times 360$	
3	Clearing fee	$5,000,000 \times 163.30$	
4	Additional retail	$0 \times 2,204$	
	C_EVN	lines 1 + 2 + 3 + 4	
5	CfD	$(1,250 - 1,150) \times 5,000,000$	
	C_KH	C_EVN + CfD	
	Effective	C_KH ÷ 5,000,000	

Which way does the CfD flow? _____ · Self-check: app → Workshop 1.

Worksheet S2 — Shortfall (Load > Gen)

Q_c = 8,000,000

Q_KH = 9,000,000

FMP = 1,600

Strike = 1,500

#	LINE	CALCULATION	VND / MONTH
1	Market energy	$8,000,000 \times 1,600 \times 1.026 \times 1.008$	
2	Service fee	$8,000,000 \times 360$	
3	Clearing fee	$8,000,000 \times 163.30$	
4	Additional retail	$1,000,000 \times 2,204$	
	C_EVN	lines 1 + 2 + 3 + 4	
5	CfD	$(1,500 - 1,600) \times 8,000,000$	
	C_KH	C_EVN + CfD	
	Effective	C_KH ÷ 9,000,000	

Why is line 4 back, and why is the CfD negative? _____ · Self-check: app → Workshop 2.

Worksheet S3 — Excess (Load < Gen)

Q_KH = 5,000,000

gen ≈ 6,500,000

FMP = 1,100

Strike = 1,250

#	LINE	CALCULATION	VND / MONTH
1	Market energy	$5,000,000 \times 1,100 \times 1.026 \times 1.008$	
2	Service fee	$5,000,000 \times 360$	
3	Clearing fee	$5,000,000 \times 163.30$	
4	Additional retail	$0 \times 2,204$	
	C_EVN	lines 1 + 2 + 3 + 4	
5	CfD	$(1,250 - 1,100) \times 5,000,000$	
	C_KH	C_EVN + CfD	
	Effective	$C_KH \div 5,000,000$	

The excess (settles nothing)

Excess volume	$6,500,000 - 5,000,000$	
Spot value of excess	$1,500,000 \times 1.008 \times 1,100$	
Foregone CfD uplift	$(1,250 - 1,100) \times 1,500,000$	

Who carries the over-generation risk? _____ · Self-check: app → Workshop 3.

Worksheet N — The Negotiation

Starting point: Scenario 1 volumes (5,000,000 kWh, FMP ≈ 1,150). Each side proposes a strike, then settle it live in Workshop 1.

ROUND	PROPOSED STRIKE (VND/KWH)	CFD = (STRIKE – 1,150) × 5,000,000	FLOWS TO...
Off-taker opens			
Developer opens			
Counter			
Agreed strike			
Resulting C_KH at the agreed strike			
Strike where the CfD crosses zero (= FMP)			
Strike where the buyer first beats BAU (app multi-year)			

Drag the strike slider in Workshop 1 to confirm each row. Did all three gates (buyer ≤ BAU, seller IRR, lender DSCR) ever pass at once?
